About AMECA

Asian Management Economics Commerce Association is a registered body of Management, Economics and Commerce Professionals, established in 2015 with the purpose of promoting Knowledge and understanding through research and publications emphasizing inter- disciplinary approach for Social and National issues.

OBJECTIVES OF AMECA

The Objective of Asian Management Economics Commerce Association shall be to promote teaching, research and enhance the knowledge of emerging trends in Management, Economics and Commerce in general and to study the issues of Management, Economics and Commerce Professionals specifically.

Conducting Annual Conferences both National and International and publication of journals and books for facilitating exchange of ideas.

Conducting Coaching Classes for Civil Services and Competitive Exams for the benefit of poor, downtrodden, minorities and meritorious candidates, besides organizing campus interview for placement.

This Association will function without any profit and political motives.

OBJECTIVES OF THE CONFERENCE

The overall objective of this conference is to provide a platform and stimulate research and discussion on various issues of environmental and climate challenges in addition to adaptation and mitigation measures which will promote sustainable development as well as realization of SDG goals of UN by 2030.

1. ENERGY AND ENVIRONMENT

Energy is an important source of livelihood with its positive and negative attributes. A clean energy revolution is taking place across western countries, underscored by the steady expansion of the renewable energy sector. The clean energy generates hundreds of crores in economic activity, and is expected to continue to grow rapidly in the coming decades. There is tremendous economic opportunity for the countries that invent, manufacture and export clean energy technologies. Above all, it will help to reduce greenhouse gas emissions paving the way for a sustainable future for the mankind. Though non-energy resources are easier and cheaper, the reserves would be exhausted in the next few decades. Hence, emphasis should be placed on renewable and clean sources of energy. Fuel cells offer a highly efficient and fuel flexible technology that cleanly produces power and with zero emissions. Fuel cells have several benefits over conventional combustion-based technologies currently used in many power plants and passenger vehicles. Fuel cells have lower emissions than combustion engines. Hydrogen fuel cells emit only water, so there are no carbon dioxide emissions and no air pollutants that create smog and cause health problems at the point of operation. In the context stated above, there is an imperative need to formulate an appropriate energy policy which will mitigate hazards of climate change.

- (i) Clean Energy Sources which are renewable. Solar, wind, water, geothermal, biomass, nuclear and Hydrogen and fuel cells.
- (ii) Fossil energy sources which are exhaustible and non-renewable such as coal, oil, and natural gas.
- (iii) Energy policy

2. POLLUTION AND ENVIRONMENT

- (i) Air Pollution
- (ii) Noise pollution
- (iii) Water pollution
- (iv) Policy measures to control pollution

3. WASTE GENERATION AND ENVIRONMENT

- (i) Municipal solid wastes
- (ii) Household waste
- (iii) E-waste
- (iv) Coastal wastes
- (v) Waste management Policy

4. GLOBAL CLIMATE CHANGE AND ITS IMPACT ON INDIA:

- (i) Responding to Climate Change: A Revisit to Economic Development Theories
- (ii) Adaptation and Mitigation Measures for a Sustainable Future
- (iii) Climate Resilient Industrial Development Paths
- (iv) Environmental Hazards and its Impact on Human Health

PREVIOUS CONFERENCE

The Department of Economics, Thiruvalluvar University, Vellore, Tamil Nadu in Association with Asian Management Economics Commerce Association Organised Two Day International Conference on "Competing in the New Era of Globalisation- Challenges and Prospects" from 21.09.2017 to 22.09.2017 and released two volumes of the Proceedings of the International Conference with ISBNs.
